

Jörg Junghanns, Vice President Europe – Digital Supply Chain, Capgemini’s Business Services

E- mail:

joerg.junghanns@capgemini.com

Jörg leads our Digital Supply Chain Practice in Europe for Capgemini Business Services, providing transformation and service solutions to clients cross-industry.

He leverages innovation coupled with a strategic and service-oriented mindset to help clients transform their supply chain operations into a growth enabler. This involves Capgemini’s digital service capabilities around planning, order management and fulfilment, operational procurement, supply chain data management, as well as intelligent automation solutions to enhance these processes’ corporate value contribution.

He has successfully delivered projects around digital and operations strategy, shared services, process design and piloting, business deployment, as well as project management, work, rollout and master planning, most of these assignments in a global, multinational and multicultural context.

Jörg has over 18 years of experience in business and management consulting, mainly in the transportation, logistics and in supply chain intensive industries, with an operations and supply chain fulfilment focus.

Jörg studied at Furtwangen University, Germany and California State University, USA, holding an International Business Degree in Finance & Controlling and in Human Organisations Management.

Session Title: **Autonomous supply chains – supporting the Frictionless Enterprise**

Description:

In an age of increasingly complex corporate and customer structures, businesses are under constant pressure to transform and upscale supply chain operations to remain competitive. Traditional, highly manual operations have limited supply chain efficiency and multiple time-consuming interactions that act as a roadblock to organizations. These impediments prevent organizations from responding quickly to customer demands during volatile situations such as the global pandemic the world is currently facing.

Today’s extraordinary circumstances and supply chain disruptions call for organizations to have a renewed outlook on how businesses are run and upscaled, while also continuing to be cost-efficient with reduced dependency on manual tasks. Adopting an “autonomous supply chain” could help your organization build a more resilient, integrated, and customer-centric supply chain function and support the creation of a Frictionless Enterprise.

Join [Jörg Junghanns](#) at this session to learn how Capgemini’s [Digital Supply Chain](#) offer can help your organization harness the power of new technologies and innovative, customer-centric business models to realize an autonomous supply chain to deliver increased revenue, profitability, working capital, and customer satisfaction.
